### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 112***

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitation "the gondola" in line 3. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wiegel U.S. Patent 5,769,724 in view of GB Patent 3333 ('333).

Wiegel disclosed a catapult for launching a parachutist comprising an articulated cradle (7) as shown in Fig. 4 connected to a sling assembly (8), the catapult utilized a bungee/shock cord-activated lever to propel the cradle into the air. It is noted that Wiegel failed to teach the use of a counterweight supported by two pulley blocks and connected to two fast runs passing over two pulleys as claimed. However, GB ('333) an airplane launching assembly using a counterweight (i) supported two pulley blocks and connected to two fast runs (j) passing over two pulleys (k) as shown in Fig. 1. Therefore, it would have been obvious to one of ordinary skill in the art to modify the

Art Unit: 3711

catapult assembly of Wiegel with the teachings of GB ('333) to achieve the predictable result of providing a simulated ancient launching ride.

Regarding the specific ratio of the pulley block as set forth in claims 3 and 10, and the travel distance of the counterweight in claim 7; such features are dictated by the weight of the cradle with the participant and the intended launching distance and can be adjusted by one skilled in the art to provide a fun yet safe ride environment.
